

NORWOOD'S EPITOMIE:
OR THE
APPLICATION
OF

The Doctrine of TRIANGLES in
certaine *Problemes*, to the use of the
Plaine Sea-chart, and *Mercators-*
chart.

Being the two Principall and most Usefull
kinds of Sayling.

With a Table of Artificiall *Sines*,
Tangents, and the *Complements* arith-
meticall of *Sines* supplying the use of
Secants.

To *Radius* 10,00000. and to every
degree and minute of the Quadrant.

ALSO,

A *Chiliad*, or the *Logarithmes* of absolute
Numbers from a Unite to 1000.

By RICH: NORWOOD, Reader of the
Mathematicks.

AN APPENDIX, *Touching the Application of the Doctrine of Triangles, in the two principall kinds of Sayling.*

Y intent was here to have annexed a treatise of Navigation, and especially of such Points therein as have reference to the whole *Doctrine of plaine and sphericall Triangles*; But I have here shewed the resolution of all usefull Problemes, touching the two principall kinds of Sayling by right lyned Triangles.

Questions of Sayling by the plaine or ordinary Sea-chart.

Although the ground of the Projection of the ordinary Sea-chart being false, (as supposing the Earth and sea to be a plaine Superficies) and so the conclusions thence derived must also for the most part be erroneous; yet because it is most easie and much used, and the erreurs in small distances not so evident, wee will not wholly neglect it.

Quest. 1.

Sayling 100 Leagues upon the sixth Rumbe: how much shall I alter my Parallel or Latitude?

Note. The angle that any Point of the Compasse makes with the Meridian, we call the Rumbe: but the angle that it makes with any Parallel, we call the complement of the Rumbe.

And forasmuch as to every point of the Compasse there answers 11 deg. 15 min; therefore the sixth Rumbe from the Meridian (namely *E n e*, *E s e*, *W s w*, or *W n w*) makes an An-

Problemes of Sayling

gle therewith of 67 deg. 30 min.
whose complement 22 deg. 30
min. is the angle of the same
rumbe with every parallel.

Now admit I saile from D to
A, east northeast 100 leagues; I
demand the difference of latitude
D B.

By the third case of plaine Triangles.

As Radius

To the distance runne,	A D 100 leagues	2,00000
So sine complem. the rumbe, s A 22 deg. 30 min.		9,58284
To the difference of latitude, D B 38 $\frac{1}{2}$ leagues		1,58284

In like manner you may find the difference of latitude, for
any distance runne upon any other point of the Compass.

2. *Sayling 100 leagues upon the sixth Rumbe: how
farre am I departed from the Meridian of the place
from which I came.*

That is, By the same things given as before, I demand A B.

By the third case of plaine triangles.

As Radius

To the distance runne,	A D 100 leagues	2,00000
So is the sine of the rumbe, s D 67 deg. 30 min.		9,96562
To the departure from the merid. A B 92 $\frac{1}{4}$ leagues,		1,96562

3. *Sayling upon the sixth Rumbe, till I alter my Lati-
tude one degree, I demand how farre I have sai-
led?*

As sailing from D to A, east northeast, till the difference of
latitude D B be 20 leagues; I demand the distance runne
A D.

Say

by the plaine Sea-chart.

3

Say by the second case of plaine triangles.

As sine complem. the rumbe, s A 22 deg. 30 m. co. ar. 0,41716

To the difference of latitude D B 20 leagues; 1,30103

So is Radius

To the distance runne A D 52, $\frac{1}{2}$ leagues, 1,71819

The like question might be moved by the departure from the meridian given.

4. Sayling upon the sixth Rumbe, till I have altered my Latitude one degree: how much am I departed from my first Meridian?

As sayling from D to A, east northeast, till the difference of latitude D B be 20 leagues; I demand A B, my departure from the meridian, (as for Example in the former type.)

By the first case of plaine triangles.

As Radius

To the difference of latitude, D B 20 leagues, 1,30103

So is the tangent of the rumbe, t D 67 deg. 30 min. 10,38278

To the departure from the merid. A B 48, $\frac{1}{2}$ leag. 1,68381

In like manner by the departure from the meridian given, you might find the difference of latitude.

5. Sayling upon some Rumbe, betweene the North and the East 52, $\frac{1}{2}$ leagues; and finding that I have altered my Latitude one degree: I demand upon what Point I have sayled?

As if I sayle from D to A, (being some rumbe betweene the east and north) 52, $\frac{1}{2}$ leagues; and then find the difference of latitude D B, to be 20 leagues; I demand the angle A D B.

Say by the sixth case.

As the distance runne, D A 52, $\frac{1}{2}$ leagues, co. ar. 8,28191

Is to Radius;

Problemes of Sayling

So is the difference of latitude DB, 20 leagues, $\frac{1,30103}{9,58294}$

To sine complem. the Rumbes, s A, 22 deg. 30 min. $\frac{9,58294}{9,58294}$

Whose complement D, 67 deg. 30 min. is the sixth Point from the Meridian, namely east northeast. Here we neglect some part of a minute (as in these things not to be regarded) and so in other places.

6. *Sayling upon some Rumb betweene the North and the East $52\frac{3}{4}$ leagues; and finding that I have altered my Latitude one degree: I would know my departure from my first Meridian?*

By the seventh case.

To the distance runne, add the difference of Latitude, and also subtract it from the same, noting the Summe and Remainer. Then add together the Logarithmes of this summe and remainder, and halfe that totall is the Logarithme of the Distance from the first Meridian.

Distance run D A, $52\frac{3}{4}$ leag.	} Summe $72\frac{3}{4}$ leag. 1,85884
Differ. of latit. D B, 20 leagues	} Remain. $32\frac{3}{4}$ leag. 1,50853
	<u>3,36737</u>

Departure from the Meridian A B, $48\frac{3}{4}$ leagues. 1,68368

The same may be otherwise found by the same case.

And in like sort might the difference of Latitude be found, the departure from the Meridian being knowne.

7. *The distance of the Meridians of two Places, and the difference of the Latitudes of the same places being given: To find the Rumb and distance?*

As let A represent the Lizard in the west part of England, and A B the Parallel thereof, and let D represent St Maries Island being one of the Azores, D B, the Meridian thereof.

Then

by the plaine Sea-chart.

5

Then is AB , the distance of the Lizard from the Meridian of *St. Maries*, which let be 272 leagues; and AB , the distance of their parallels, or difference of their latitudes 256 leagues. I demand the rumbe, namely the Angle at D , and the distance in the rumbe AD .

First for the rumbe, say by the fourth case.

As the difference of latitude DB 256 leagues, *co. ar.* 7,59176
Is in proportion to Radius :

So is the distance of the meridian AB , 272 leagues, 2,43457

To the tangent of the rumbe $\angle D$, 46 deg. 44 min. 10,01633

Which is the fourth Rumbe from the meridian, and 1 deg. 44 min. more ; which shewes the course from *S. Maries* to the Lizard, to be northeast, 1 deg. 44 min. easterly : or from the Lizard to *S. Maries* southwest, 1 deg. 44 min. Westerly. And thus it should be by the plaine Chart.

2ly, For the distance AD ; say by the 2 case.

As the sine of the rumbe, $\angle D$ 46 deg. 44 min. *co. ar.* 6,13776

To the distance of the meridians AB , 272 leagues, 2,43457

So is Radius

To the distance of the places AD , 373 $\frac{1}{2}$ leagues, 2,5733

And such should be the distance by the plaine Chart.

8. *Sayling away W S W, I see a point of Land, which I set, and find to beare from me West by North, and having sayled fixe leagues further, I find it beares from me Northwest by west : I would know how farre it is distant ?*

A 4

As

As let E be a point of land, which when the ship is at A, I set and finde to beare from west by north, but I hold on my course from A to D, west south-west 18

miles, and at D, I set the same Point of land againe, and find it to beare from me northwest by west : I demand the distance thereof D E, that is, how farre it was from me in my last observation.

First, I consider betweene A E, the west by north, and A D the west south-west, is three Points of the Compass, that is, 33 deg. 45 min. which is the angle at A : also betweene E A, the east by south, and E D, the south-east by east are two points, that is 22 deg. 30 min.

Therefore, by the 8 case of plaine triangles.

As sine the angle at \angle Point seene, \angle E 22 d. 30'. co.ar. 0,4176
Is to the distance runne ; A D 18 miles, 1,25527

So sine the angle at the first } \angle A 33 deg. 45 min. 9,74474
place of observation,

To the distance of the point seene, E D 26 $\frac{1}{2}$ miles, 1,541717

Whereby it appeares, that the distance of the Point seene from the place of your last observation is 26 miles, and a fullong In like manner you may find the distance thereof from the place of your first observation A.

Admit the course from the Lizard to S. Maries be s w, the distance 37 $\frac{3}{4}$ leagues. A certaine ship bound from the Lizard to S. Maries, steeres away s w, and afterwards w by s, and so sometimes upon one of these Points, sometimes upon the other, till she arrives at St. Maries ; now I demand how many leagues she hath sayled upon one of these Points, and how many upon the other.

Let

Let A be the Lizard, E St. Maries, and seeing Sw , being from south-west two Points, makes an angle therewith of 22 deg. 30 min. which let be A; also west by south makes with Sw an angle of 33 deg. 45 min. which let be E; also south Sw , makes with west by south an angle of 56 deg. 15 min. which let be the complement of D to 180 degrees.

Therefore by the 3 case,

As the sine of	D, 56 deg. 15 min. comp. ar.	0,08015
To the distance given A E,	373 $\frac{1}{2}$ leagues.	2,57113
So is the sine of	E, 33 deg. 45 min.	9,74474
To	AD, 248 $\frac{1}{2}$ leagues.	2,39602

Which is the distance run upon the south south-west Point.

Again,

As the sine of	D, 56 deg. 15 min. co. ar.	0,08015
To the distance given A E,	373 $\frac{1}{2}$ leagues.	2,57113
So is the sine of	A, 22 deg. 30 min.	9,58284
To the way runne	E D, 171 $\frac{1}{2}$ leagues.	2,23412

Which is the distance runne upon the west by south Points.

10. A Marchant man, being in the Latitude of 43 degrees. falls into the hands of Pyrats; who amongst other things take away his Sea-compass. But when he is gotten cleare, hee sayles away as directly as he can, and after two dayes meets with a man of War; who also had bin the day before in the Latitude of 43 deg. and had sayled thence se by s , 37. leagues. He desirous to find those Pyrats, the Marchant-man tells him, he left them lying too and fro where they tooke him, and hee had sayled since at least 64 leagues, betweene the south and west: what course shall the man of Warre shape to find these Pyrats?

Let

Let AE be the Parallel of 43° .
 D the place where the ships meet. Then is there given AD 64 leagues, ED 37 leagues, and the angle DEA five points or $56^{\circ} 15'$.

Therefore, by the 9 case of plaine Triangles.

As the distance runne by the Merchant man,	}	AD , 64 leagues, <i>co. ar.</i> 8,19382	
To find the angle given,		E , $56^{\circ} 15'$	9,91985
So is the distance runne by the man of Warre	}	ED , 37 leagues.	1,56820
To find an angle required,		A , $28^{\circ} 44'$	9,68187

That is west southwest, $6^{\circ} 14'$ southerly, and so hath the Merchant sayled; therefore to returne to the same place, he must shape his course east northeast, $6^{\circ} 14'$ northerly.

II. *There are two Ports lying NE, and SW, one off another, a Ship sayles from the westermost of these Ports East southeast 47 leagues, another departing from the Eastermost port sayles 66 leagues, and then meets with the former; what course hath this second Ship kept, and how farre are these Ports a sunder?*

Let the northeast Port be A , the southwest E , and the place where these Ships meet at D . And forasmuch as from E to A , the course is northeast, and from E to D east southeast; therefore the angle at E , is $67^{\circ} 30'$. and the side ED , 47 leagues, and AD 66 leagues.

There-

Therefore by the 9 case of plaine Triangles.

As A D, 66 leagues, *co. ar.* 8,18046
 To sine E, 67 deg. 30 min. 9,96561
 So E D, 47 leagues, 1,67210
 To sine A, 41 deg. 08 min. 9,81817
 And seeing from A to E, the course is South-west, and from A to D, 41 d. 08 m. more southerly: therefore the course from A to D, is South 3 deg. 52 min. Westerly.

Secondly, for the distance of these Ports A E, the angle at A, being 41 deg. 08 min. and the angle at E, 67 deg. 30 min. the Summe of them both is 108 deg. 38 min. which subtracted from 180 deg. leaves the angle at D, 71 deg. 22 min.

Therefore by the 8 case of plaine Triangles.

As sine E, 67 deg. 30 min. *co. ar.* 0,03439
 To A D, 66 leagues, 1,81954
 To sine D, 71 deg. 22 min. 9,97662
 To A E, 67 $\frac{1}{2}$ leagues, 1,83055
 So that the distance between the two Ports is 67 $\frac{1}{2}$ leagues.

Some may thinke it requisite, that the later part of this Probleme should have beene a distinct case in plaine Triangles; but because the same things are here given as in the 9 Case, and the operation manifest by the Eight and Nine, I thought it not necessary to make another Case of it.

12. *Coasting along towards the evening, I have sight of a Cape or Headland, beyond which I desire to steere in the next morning it beares from me S S e, and is distant by estimation 11 leagues; but I steere away South, till two of the clocke in the morning, about 12 leagues; and then would know how the Cape beares from me, and how farre it is off?*

As admit A, I observe the Cape D, to beare from me South Southeast 11 leagues; but I steere away South, to E 12 leagues. I have then A D 11 leagues, A E 12 leagues, the angle at A 22 deg. 30 min. (As for example in the fore-going type,

First

First then for the angle at E, by the 10 case.

As $AB \perp AD$, 23 leagues,	$co : ar :$	8,63828
To $AE \text{ --- } AD$, or league ;		
So $t \frac{1}{2} (B \perp D) \dagger 78 \text{ deg. } 45 \text{ min.}$		10,70134
To tang : an angle F , 12 deg. 20 min.		9,33962
Which subtracted } E , 66 deg. 25 min.		
there remaines }		

In working this example, because the angle given A , is 22 deg. 30 min. therefore the other two E and D , are 157 deg. 30 min. (by the first Lemma of the third chapter of plaine Triangles) the halfe whereof is 78 deg. 45 min. Whereby wee find an angle F , 12 deg. 20 min. which subtracted from 78 deg. 45 min. there remaines the angle at E , 66 deg. 25 min. Wherefore seeing $E \cdot A$ is a north line, $E \cdot D$ is almost east north-east, namely east north-east 1 deg. 5 min. northerly.

2. ly, for the distance of the cape ED , by the 8 case.

As sine the angle found,	$s E$, 66 d. 25 m. $co. ar.$	0,3788
To the distance in the evening, AD , 11 leagues :		1,04139
So the sine of the angle given, $s A$, 22 deg. 30 min.		9,58284
To the distance in the morning, ED , $4 \frac{1}{2}$ leagues,		0,66211

That is above 4 leagues and a halfe distant.

13. *Admit I sayle away from a certaine Port SSW . 50 leagues, and thence againe W by S , 30 leagues ; upon what Point have I made my way good, and how farre am I come from a Port ?*

As admit I sayle from A to D south south-west 50 leagues, and from D to E , west by south 30 leagues, there is required the course A , or E , and distance AE .

From the south south-west to the west by south, are 5 points, that is 56 deg. 15 min. which is the complement of the angle at D , to 180 deg. So that the angle at D , is 123 deg. 45 min. Wherefore here are given the two sides AD , and ED , and their contained angle at D ; Therefore

As $AD \perp ED$, 80 leagues, $co : ar : 8,09691$
 To $AD \text{ --- } ED$, 20 leagues, $1,30103$
 So $\frac{1}{2} (A \uparrow E) \uparrow 28 \text{ deg. } 08 \text{ min.}$ $9,72810$
 To $\uparrow F$, $07 \text{ deg. } 37 \text{ min.}$ $9,11604$

Which subtracted } $A 20 \text{ deg. } 31 \text{ min.}$
 there remains }

Wherefore seeing the course from A to D, is south south-west,
 the course from A to E, is $20 \text{ deg. } 31 \text{ min.}$ more westerly, that
 is, south-west 2 deg. southerly; so that I have made my way
 good south-west two deg. southerly.

Secondly, for the distance upon that Point.

As sine the angle found, $\angle A$, $20 \text{ d. } 31 \text{ min. } co : ar : 0,45534$
 To his opposite side given, ED , 30 leagues, $1,47712$
 So sine the angle given, $\angle D$, $56 \text{ deg. } 15 \text{ min.}$ $9,21985$
 To his opposite side required, AE , $71 \frac{1}{2}$ leagues, $1,85231$
 Which is the distance from that Port.

14. *There are two Ports in one and the same Parallel
 or Latitude, distant 64 leagues, and there is a cer-
 taine Island more Southerly, distant from the Ea-
 stermost of these Ports 47 leagues, and from the
 Westermost of them 34 leagues: I demand the
 course from the Eastermost port to that Island?*

Let the Easter-
 most port be A, the
 westermost E, both
 in one and the same
 parallel AE, distant
 64 leagues; and let
 the Island be D, di-
 stant from A, 47
 leagues, and from E 34
 leagues; there is required, the course
 from A to D, that is, the angle at A, or the complement
 thereof.

Problemes of Sayling

By the 12 case of plaine Triangles.

As the distance of the ports A E, 64 leagues. *co. ar.* 8,19382
 To the summe of A D, and E D, 81 leagues, 1,90848
 So is the difference of A D & E D, 13 leagues, 1,11394
 To a certaine line A, 16 $\begin{smallmatrix} 454 \\ 1564 \end{smallmatrix}$ 1,21624
 Which added to A E, is 80 $\begin{smallmatrix} 157 \\ 1564 \end{smallmatrix}$
 The halfe whereof is A B, 40 $\begin{smallmatrix} 227 \\ 1564 \end{smallmatrix}$

Then by the 6 case of plaine Triangles.

As A D 47 leagues, *compl. arith.* 8,32790
 To Radius;
 So A B, 40 $\begin{smallmatrix} 527 \\ 1564 \end{smallmatrix}$ 1,60452
 To sc A, s 58 deg. 51 min. 9,93242

That is south west and by west 2 deg. 36 min. westerly, which is the course from the Eastermost port to the Iland.

15. *A Ship sailes from one Port to a second S S E, 76 leagues, and from thence to a third 54 leagues, and from that third to the first 85 leagues : I demand the Course from the second Port to the third, and from the third to the first?*

This and the like are to be wrought as the former, which therefore we leave to your owne Practice.

Of Sayling by MERCATORS-Chart.

AND thus much of the plaine Chart, which as it hath this commodity that it is most easie; so it hath some discōmodity intollerable. For there be very few Places that can therein be expressed according to their true Scituation and distance one from another. Which as it is a great impediment in the practice of Navigation; so it hath caused much confusion,

on, in the *Geographical* and *Hydrographical* descriptions of Places; inſomuch as there are ſcarce extant any Deſcriptions of the World or the parts thereof, that are not peſtered with notorious Errours: the greateſt part of them ariſing. It is indeed ancient, and till the Sea-Compaſſe was knowne, it was the apteſt Chart that could be uſed; becauſe till then, men were Coaſters, and for the moſt part returned backe the ſame way they went forth, and it may ſtill ſerve without any great Errour in ſuch places as are neere the Equinoctiall, alſo in many other places for ſhort Voyages, and even for long voyages, provided that a man be ſure to returne the ſame way that he went, or neere the ſame. Otherwiſe, if he truſt to the plaine Chart, hee will be moſt groſſely deceived many times in his courſe a Point or two of the Compaſſe, and in his Diſtance many hundred miles. But in this Sea-chart called *Mercators*, all or any parts of the World may be ſet downe, according to their Longitudes, Latitudes, Courſes and Diſtances, as truly and farre more conveniently for the Mariners uſe then upon the Globe it ſelfe: So that it will truly ſhew the direction and Diſtance from place to place, which way ſoever a man goes or returnes.

Some men will ſay, that in divers reckonings by *Mercators* Chart, they have found as little certainty as by the Plaine Chart. Which I deny not, but the reaſon is, becauſe there are few or no Charts made directly according to this Projection. It will be ſaid, yes, there are many; and that a man may have of them whenſoever hee will beſpeake them. I grant a man may have thoſe which are ſo called, but that which is ſuch indeed, muſt not only have the Meridians, Parallels, and Rumbs drawne according to this Projection; but the Sea-coaſts muſt be inſerted by the like Art and meanes, as they have formerly beene inſerted into the common Sea-chart: otherwiſe he that ſhall transferre places out of the common Sea-chart into *Mercators*, without due knowledge and reſpect upon what occaſion or for what reaſon they were ſo placed in the Common Sea-chart; hee ſhall transferre the errours of the one into the other, and that ſometimes with increaſe. Wherefore it requires

more than an ordinary judgement, to draw a Plot directly according to this Projection, for any Place or places; and hee must further know, or be made acquainted with the reckonings of Mariners frequenting those places; and that truly whether with allowance or without, and whether agreeing or disagreeing with their Plots, and so comparing one thing with another, and weighing all in the ballance of a good judgement, he shall be able to doe it. The ground of the Projection of this kinde of Charts was pointed at by *Ptolomey*, many hundred yeares since; and according to that ground, *Mercator* did of late yeares set forth an universall Map of the World, whereupon these have bin called *Mercators Charts*. But the way how to describe them was first taught by that learned Navigator of our Times Mr. *EDWARD WRIGHT*, in his Booke of the *Correction of Errors in Navigation*. From whence also the ground and reasons of these ensuing Problemes are to bee taken: and if wee would be as gratefull to our owne Countrymen as to Strangers, I see not but we may ascribe as much to him in this as to any other man. Now that which hee hath shewed to performe by the Chart it selfe, we will here shew to worke by the Doctrine of plaine Triangles, using the helpe of the Table of *Logarithme Tangents*, beginning at 45 degrees 00 minutes, and so increasing upwards, accounting every 30 min. to be one Degree of the Meridian line, as the Tangent of 45 deg. 30 min. to be one degree of the Meridian line, and the Tangent of 46 deg. 00 min. to be two Degrees 00 min. of the Meridian line, and so forwards; so that every Minute is two minutes of the Meridian line, and although that these be not the same Meridionall parts that are in the Doctrine of Triangles, yet they proceed in the same proportion as the *Secants* added together doe, and shall produce the same solution to every Probleme of Sayling by *Mercators-Chart*, as y other Tables doe; but because in this small volume wee have but one *Chilias* of 1000 Logarithmes, I shall worke by Leagues and not by Miles, or Minutes; Yet I shall resolve the same Problemes of Sayling by *Mercators-Chart*, that are set downe in the Doctrine of Triangles.

Prob. 1. *To find by these Tables what Meridionall Leagues are contained in any difference of Latitude.*

TO performe this Probleme wee must take halfe of each of the given Latitudes, and to each halfe adde 45 degrees 00. min. and the Sunne shall shew us the Degrees and Minuts, where we shall find the Tangent to give us the Meridionall leagues from the Equinoctiall to each Latitude, but it shall suffice us to subtraet the lesser Tangent out of the greater, and to multiply the Difference or remainder by 10, and to divide that Product by 376. and the quotient shall be the Meridionall leagues, contained betweene the two Latitudes.

As let one Latitude be 50 deg. 00 min. the other 32 deg. 35 min. The halfe of 50 deg. 00 min. is 25 deg. 00 min. to which adde 45 deg. 00 min. the Sum is 70 d. 00 m. which are 43893.

The halfe of 32 deg. 35 min. is 16 deg. 17 min. and a halfe, to which adde 45 deg. 00 min. the Summe is 61 deg. 17 min. 30 where we must looke the equall parts, viz. at the Tangent of 61 deg. 17 min. and a halfe, which are 26147. Which subtraet from 43893. and the remainder is 17746. which multiplied by 10, is 177460. and that divided by 376. the quotient is 471 Leagues neereft, which are the Meridionall leagues contained betweene the two Latitudes, and the like is to be done for all Latitudes whatsoever.

Now although this way doth a little differ, from that way done by Meridionall parts; yet the Difference is of no validity to breed any considerable error in the Course, and so by consequence not in the Distance; and therefore I desire a favourable construction of it.

Prob. 2. *The Latitudes and difference of Longitude of two Places given: to find the Rumb and distance.*

TO the intent the application may be the more evident, we will give Examples of two Places expressed in the Chart.

As admit the latitude of the Lizard to be 50 deg. 00 min. the latitude of Summer-Ilands, sometimes called the *Bermudas*, 32 deg.

deg. 25 min. and the difference of Longitude to be 70 deg. 00 min. the Summer-Ilands being so much to the westward of the Lizard : I demand the Course, and the distance from the one to the other ?

As in this right angled Triangle ADB. Let A represent the Lizard, and AB the Parallel thereof, D Summer-Ilands, and DB the Meridian thereof.

Then is there given DB, the difference of latitude 17 d. 35 m. and AB the difference of Longitude 70 d. 00 m. whereby the angles and Hypothenusall should be found by the fourth and second Cases of plaine Triangles. But because in this kind of Projection, the degrees of Longitude and Latitude are not equal ; (except in places neare the Equinoctiall) the degrees of latitude at every Parallel, exceeding the deg. of longitude, in such proportion as the Equinoctiall exceeds that Parallel ; therefore these differences of longitude and latitude, must first be expressed by some one common measure. And for that purpose serves the table of Tangents, which sheweth how many equall leagues are from the Equinoctiall to every degree of latitude : namely of such equall leagues as a degree of longitude doth containe 20.

Wherefore multiplying 70 deg. 00 min. the difference of longitude by 20, I have 1400 for the Meridionall leagues contained in the difference of longitude ; also (by the last Probleme) I find the Meridionall leagues contained in the difference of latitude to be 472, so that DB is 472 leagues, and AB 1400 such leagues.

Therefore by the 4 case of plaine Triangles.

As the differ. of latit. in leagues DB 472. *co. arith.* 732606
Is in proportion to Radius :

So is the differ. of longitude in leagues AB 1400, 314612

To the tangent of the rumbe, & D 71 deg 22 min. 547218

Which sheweth the course from the Summer-Ilands to the Lizard, to be east northeast 3 deg. 52 min. easterly, or, from the Lizard to the Summer-Ilands, W S W, 3 deg. 52 min. westerly.

Second.

Secondly, for the distance in the Rumbe.

Reduce the difference of latitude into leagues (multiplying the degrees by 20,) and to the Product adding one third of the minutes.

Then by the 2 case of plaine Triangles.

As sine compl : the rumbe, s A, 18 deg. 39 min. *co. ar.* 049514
 To the difference of latitude D B, 352 leagues, 254654
 To the distance A D, 1100 leagues, 304168

And this is the distance measured in the Rumbe ; there is a nearer cut betweene these two Places, whereof we shall speake hereafter in *Great Circle sayling* ; which is by Segments of severall Rumbes often changing the course, but here whensoever we speake of the Distance of two Places, we meane their distance measured in one Rumbe.

Prob. 3. The Latitudes of two Places, and their Distance given : to find the Rumbe, and difference of Longitude.

Admit I sayle from the Lizard, being in the latitude of 50 degrees, upon some Point to the westward 1100 leagues, and then find my selfe in the latitude of 32 deg. 25 min : I would know upon what Point I have made my way good? and how much I have altered my Longitude ?

The difference of latitude D B, is 17 deg. 35 min. which reduced into leagues, is 352 leagues. (As in the foregoing type.)

As the distance sayled A D, 1100 leagues, *co ar.* 695832
 Is in proportion to Radius :

So is the difference of latitude D B, 352 leagues, 254654

To sine complement the rumbe, s A, 18 deg. 39 min. 9,50486

That is west southwest 3 deg. 51 min. Westerly.

Secondly, for the difference of Longitude.

Find by the first Probleme what Meridionall leagues are contained in the difference of Latitude, which are here 472, then say ;

B 2

As

As Radius

To the difference of latitude in leagues, D B 472, 267394
 So is the tangent of the rumbe, \angle D, 71 deg. 21 min. 47218

To the difference of longitude in leagues, A B 1400. 314612
 Which leagues reduced into degrees, dividing them by 20,
 the quotient is 70 deg, the difference of longitude required.

Prob. 4. By the Rumbe, and Latitudes of two Places given : to find their distance, and difference of Longitude.

A Dmit I sayle from the Lizard, being in the Latitude of 50 deg. west south west 3 deg. 51 min. westerly, till I find my selfe in the latitude of 32 deg. 25 min : I demand how farre I have sayled, and how much I have altered my Longitude ?

The distance is found as in the latter part of the second Probleme thus. The difference of Latitude converted into leagues is 352. Say then,

As sine complem : the rumbe, \angle A 18 deg. 39 min. 7,49514
 To the difference of latitude D B, 352 leagues, 214654
 So is Radius,

To the distance A D, 1100 leagues, 304168

And so much is the distance : The difference of Longitude may be found as in the later part of the 3. Probleme ; saying,

As Radius, to the difference of Latitude in Meridionall leagues, so is the tangent of the Rumbe, to the difference of Longitude in leagues.

Prob. 5. By the difference of Longitude, Rumbe, and one Latitude : to find the other Latitude and the distance ?

A Dmit I sayle from the Lizard, being in the latitude of 50 deg. west south west 3 deg. Westerly, till I have altered my longitude 70 deg : how much have I laid the Pole, and how farre am I from the Lizard ?

Reduce

Reduce the difference of Longitude into leagues by 20, and so it makes 1400; Then say,

As the tangent of the rumbe, $\angle D, 71 \text{ d. } 21 \text{ m. co. ar. } 9,52829$
To the difference of longitude in leagues, $AB, 1400.$ 314612
So is Radius,

To the difference of latitude in leagues, $DB \ 472.$ 267441

Which 472 leagues multiplied by 376, and the Product 177472, and that Divide by 10, and the quotient is 17747. Which I subtract from the equall parts of the Latitude of 50 deg 00 min. which we found by the first Probleme to be at the tangent of 70 deg. 00 min viz 43893, and the Remainder is 26146, which I seeke in the Tangents and find it at the tangent of 61 deg. 17 min. and a halfe, from which I subtract 45 deg. 00 min. and the remainder is 16 deg. 17 min. and a halfe, which being doubled is 32 deg. 34 min. The latitude of the Place to which I am to come.

Secondly for the Distance.

Having already the Rumbe, and difference of Latitude, it may be found as in the second and fourth Problemes: saying,

As sine compl: the rumbe, $\angle A \ 18 \text{ d. } 39 \text{ m. co. ar. } 0,49514$
To the difference of latitude, $DB \ 352 \text{ leagues,}$ 254654
So is the Radius,
To the distance, $AD \ 1100 \text{ leagues,}$ 304168

Prob. 6. *By the Rumbe, the Distance, and one Latitude given: to find the other Latitude, and the difference of Longitude?*

A Dmit I sayle West southwest 3 deg. 51 min. westerly, 1100 leagues; and then find my selfe in the Latitude of 32 deg. 25 min: I demand the Latitude of the place from which I came, and the difference of Longitude betweene that and this?

Problemes of Sayling

First, for the Difference of Latitude.

As Radius

To the distance runne, A D 1100 leagues, 304168

So sine compl: the runne, s A, 18 deg. 39 min. 950486

To the difference of latitude, D B, 352 leagues, 254654

Which 352 leagues converted into degrees, is 17 deg. 35 min. the difference of Latitude required: which added to 32 deg. 25 min. makes 50 deg. 00 min. the Latitude of the first Place.

The difference of Longitude is found as before in the third Probleme: saying,

As Radius, to the differ: in latitude in Meridionall leagues, so is the tangent of the runne, to the difference of longitude in leagues.

And thus the difference of longitude will be found as in this example to be 70 deg. 00 min.

If at any time you desire to convert this difference of longitude found in any Parallel into leagues, you may doe it after this Example.

7. Admis there be two Places both in the Parallel of 50 degrees: which differ in Longitude 70 deg. 00 min: I demand the Distance of these two Places?

First, it is to be understood that the Leagues of longitude in any Parallel, are not in proportion to the distance in Leagues, as the Equinoctiall, is to that parallel; or as the semidiameter of the one, is to the semidiameter of the other. That is,

As Radius is in proportion,

To sine compl. the latitude, s: 50 deg. 00 min, 980807

So is the difference of longitude; 1400 leagues, 314612

To the distance in that parallel. 900 leagues, 295419

A Table of the Angles that every Rumb or Point
of the Compasse, and every quarter of a Point maketh
with the Meridian; that is, how many Degrees and Mi-
nutes are contained in every Point, half-point, and quar-
ter-point of one fourth part of the Compasse.

1824

To the Reader.

His Table of Artificiall Sines, Tangents, and Arithmeticall Complements of Sines to supply the use of Secants, with a Chilliad of one Thousand Logarithmes is thought fit (by Mr. Richard Norwood, and Henry Bond,) to be Printed to the Radius 10,00000. that such as are desirous thereof may have it at a more reasonable rate, then the other larger Tables are at; and because it is in a more portable volume, and is of the same use that the other Tables are; For by these Tables may be resolved, all plaine and Sphericall Triangles, and all Problemes of Sayling. either according to the plaine Sea-chart, or according to Mercators chart (without any other Meridionall parts then what are contained in these Tables) as it may partly appear, if you looke in the latter end of the Appendix of the Path-way to perfect Sayling, now newly printed, Vale.
